

Why: Problem, What: What we will create, How: Explain details within "what we will create"

Mission Statement: To address the absence of connection between startups and investors outside Seoul, we will create a community website that introduces new startups and builds connections. With our community website, we will create a hub for exploring startups for investors and regular users & empower them by gathering success stories and useful tips.

Problem: For now, there is no direct connection between startups to investors and startups to startups, especially outside Seoul, so it creates the problem where startups outside Seoul doesn't get noticed. Also, the centralization to Seoul is intensifying at an alarming rate and they're lacking behind

Main means of helping startups: Create a website with profile system (main feature) & Subthread --> Vitalize regional economy (startups) and bring attention to startups outside Seoul

- By creating profiles, we aim to foster development and collaboration in startup-to-investor connection, creating an upward force in regional economy. With clear User Interface (80% of screen = startups, 20% = Filter) and filter function with specific categories, investors and regular users can search for the most suitable startups (more categories checked = more specific, narrower choice of startups).
- StartHub (subthread) focuses more on resolving the absence of startup-to-startup connection. By creating a community function that addresses the different needs of each startup, a startup can ask for help from not only experts/investors but also startups similar to them. The collaboration between them will improve the quality of startups market and thus resolve the issue of "Seoul centralization"
 - Tier system (More interaction in community = more points, more points = higher tier, higher tier = More benefits)
 - Examples of benefits: Contribute more on subthread → Incentivize possible where you can ask more questions
- Article function: Make as many startups outside Seoul known to the world/Korea while providing startups with the best data from top firms in the world and keep the database with tips compiled from them (bc they don't want to navigate through everything) --> Give them the best tips

Market our product → Like the bs ads in Instagram (reference: "Book summarizing apps" ads on Instagram)

- Why use reels/social media as marketing? → Informative reels = effective due to characteristics of the platform & type of media

What makes us special? What can we provide?

- We have a lower 진입장벽 (easy to start) for users compared to our competitors & we're easy to use

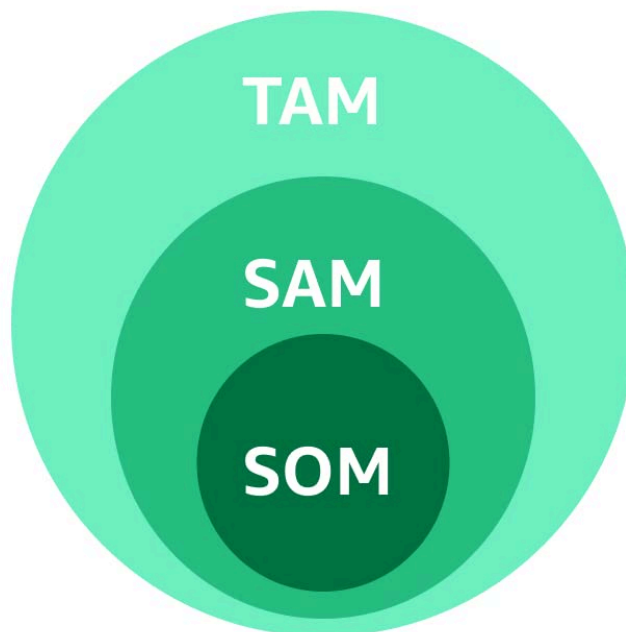

- Proper utilization of online communities (Benefit: **Connectivity** → Startups with far distances can contact and collaborate despite the distance)

How 2 sustainable:

- Keep providing companies with values
 - How? → (Subreddit will be a big part of that) → Companies will receive updated news & feedback based on how they
 - How that market is moving (via articles)
 - Mass produce articles with AI

Target Audience: TAM SAM SOM
